LITERATURE REVIEW

Olist E-Commerce Sales & Customer Experience Analytics
Team: InsightHub | October 2026

1. Feedback & Evaluation

This section records the project evaluation and feedback provided by the project instructor or reviewer. Use the table below to document the actual comments received during project review.

Review item	Details
Reviewer	Instructor / project reviewer
Review date	Date of review
Evaluation and feedback	Record the feedback and evaluation provided by the reviewer.
Actions agreed	Record the changes or actions agreed by the team.

2. Suggested Improvements

The following improvements are proposed by the team to strengthen the project's analytical accuracy, data quality, and dashboard usability.

Area	Suggested improvement	Purpose
KPI definitions	Document each KPI formula, source columns, filter context, and inclusion/exclusion rules.	Ensure consistent, reproducible calculations.
Data model	Document table grain and keys; validate relationships and test sample orders for duplicated values.	Prevent inflated sales or payment totals.
Data quality	Profile missing values, duplicates, timestamp completeness, key uniqueness, and category coverage; maintain a cleaning log.	Make data preparation transparent.
Delivery metrics	Define eligible orders and the exact late-delivery rule before calculating duration or late rate.	Ensure fair and consistent calculations.
Interpretation	Describe delivery/review relationships as associations unless causation is supported.	Avoid unsupported causal claims.
Dashboard usability	Use consistent labels, units, layouts, and filters; test slicers and visual interactions.	Improve readability and navigation.
Validation	Reconcile headline KPIs against source-level or independent calculations.	Increase confidence in reported results.

3. Final Grading Criteria

The project is evaluated across documentation, implementation, testing, and presentation, as specified in the project documentation guidelines.

Category	Evidence relevant to this project
Documentation	Project Proposal, Project Plan, Task Assignment & Roles, Risk Assessment & Mitigation, Project KPIs, Literature Review, and Requirements Gathering.
Implementation	Power BI data model, data transformations, validated measures, and four dashboard pages.
Testing	KPI reconciliation, relationship checks, filter/interaction tests, and issue-resolution records.
Presentation	Presentation of the business problem, analytical approach, dashboards, findings, limitations, and recommendations.

The team should use the official grading rubric provided by the program or instructor when assigning marks or percentages to these categories.
