TASK ASSIGNMENT & ROLES

Olist E-Commerce Sales & Customer Experience Analytics

Team: InsightHub | Four members | Four dashboard workstreams

1. Purpose

This document defines a proposed allocation for a four-person team. Each member is the primary owner of one dashboard workstream. All members share responsibility for agreeing on KPI definitions, validating the data model, reviewing the final report, and meeting project deadlines. Replace the role labels with actual member names and usernames before final approval.

2. Dashboard Ownership

Member / role slot	Primary responsibilities	Expected outputs	Assigned person
Member 1 — Dashboard Owner A	Dashboard 1: Executive Sales & Order Trends. Analyze order trends, item sales value, geographic distribution, and category contribution. Coordinate shared KPI definitions with the other owners.	One dashboard page; measure definitions; validation notes.	To be confirmed
Member 2 — Dashboard Owner B	Dashboard 2: Product & Category Performance. Compare products/categories by item sales value, order-item volume, and freight; check completeness of product attributes.	One dashboard page; measure definitions; validation notes.	To be confirmed
Member 3 — Dashboard Owner C	Dashboard 3: Customer Experience & Delivery Performance. Analyze review scores, delivery duration/late rate, and observed relationships between delivery timing and reviews.	One dashboard page; measure definitions; delivery eligibility rules.	To be confirmed
Member 4 — Dashboard Owner D	Dashboard 4: Seller & Payment Insights. Analyze seller contribution, seller geography, payment types, installments, and payment values; avoid duplicated totals across fact tables.	One dashboard page; measure definitions; validation notes.	To be confirmed

3. Shared Responsibilities

• All four members agree on shared KPI definitions before building visuals.

• All owners use the agreed data model and avoid independently redefining common metrics.

• Each owner documents source fields, assumptions, measures, filters, and validation checks for their page.

• Each member peer-reviews at least one other dashboard and contributes to final integration.

• The team leader coordinates deadlines, communication, blockers, and submission readiness; ownership does not remove shared accountability.

4. Collaboration and Handoffs

• Agree on table grain, relationship design, common measures, and data-quality rules before full dashboard development.

• Each dashboard owner submits the page with measure definitions, filter behavior, and known limitations.

• Run a shared QA review: reconcile totals to source tables and test slicers, interactions, and edge cases.

• Record agreed changes to scope, KPIs, ownership, and deadlines.

5. Confirm the Actual Assignments

Status: proposed allocation for four members; final names and ownership must be confirmed by the team.
