REQUIREMENTS GATHERING

Olist E-Commerce Sales & Customer Experience Analytics
Team: InsightHub | Four members | October 2026

1. Purpose and Scope

This document identifies the intended users, their needs, the report functions, and the quality expectations for the Olist analytics project. The team plans four Power BI dashboard pages: Executive Sales & Order Trends; Product & Category Performance; Customer Experience & Delivery Performance; and Seller & Payment Insights.

2. Stakeholder Analysis

Stakeholder	Interest / need	Engagement
DEPI instructor / reviewer	Assess alignment with program requirements, documentation quality, analytical validity, and presentation.	Review milestones and provide feedback.
InsightHub project team (4 members)	Understand the data, agree KPI definitions, prepare the model, build dashboards, validate results, and meet deadlines.	Assign owners, agree shared definitions, peer-review, and test.
Business decision-maker	View order activity and recorded item sales value over time.	Use the executive dashboard and filters.
Sales/category analyst	Compare products/categories by item sales value, order-item count, and freight.	Use the product/category dashboard.
Customer experience/operations analyst	Explore review scores, delivery duration, and late-delivery indicators.	Use the customer/delivery dashboard.
Seller/payments analyst	Explore seller contribution, geography, payment types, installments, and payment values.	Use the seller/payment dashboard.

The business roles listed above represent intended dashboard user types for requirements planning.

3. User Stories & Use Cases

User Stories

ID	User story	Priority
US-01	As a business decision-maker, I want order counts and recorded item sales value over time so that I can understand activity patterns.	High
US-02	As a category analyst, I want to compare categories/products by item sales value and item count so that I can understand contribution patterns.	High
US-03	As a customer-experience analyst, I want to compare review scores with delivery timing to identify associations worth investigating.	High
US-04	As an operations analyst, I want delivery duration and late rate for eligible delivered orders so that I can assess delivery outcomes.	High
US-05	As a seller analyst, I want seller contribution and geography so that I can understand the distribution of recorded activity.	Medium
US-06	As a payments analyst, I want payment types, installments, and values so that I can understand payment patterns.	Medium
US-07	As a report user, I want relevant slicers so that I can explore specific periods or groups.	High

Use Cases

UC-01 — Explore sales trends. Actor: business decision-maker. Flow: open Executive Sales & Order Trends, select an available period or supported dimension, and inspect order counts and recorded item sales value. Expected result: relevant visuals update based on filters.

UC-02 — Compare categories. Actor: sales/category analyst. Flow: open Product & Category Performance, compare categories/products by item sales value and item count, and inspect freight where appropriate. Expected result: comparisons use documented measure definitions and active filters.

UC-03 — Examine delivery and reviews. Actor: customer-experience/operations analyst. Flow: open Customer Experience & Delivery Performance and review scores and delivery indicators for eligible records. Expected result: observed patterns are shown without claiming causation.

UC-04 — Explore seller/payment patterns. Actor: seller/payments analyst. Flow: open Seller & Payment Insights and compare seller contribution and payment attributes. Expected result: totals use correct table-grain rules.

4. Functional Requirements

ID	Requirement	Priority
FR-01	Display distinct order counts and recorded item sales value over the available period.	High
FR-02	Compare products/categories using item sales value and order-item count.	High
FR-03	Show customer review-score distributions.	High
FR-04	Calculate delivery duration and late rate under documented eligibility rules.	High
FR-05	Analyze seller contribution and geography where fields support it.	Medium
FR-06	Analyze payment types, installments, and payment values without duplicating totals.	Medium
FR-07	Provide relevant slicers and cross-filter interactions for supported fields.	High
FR-08	Display clear titles, units, and definitions for headline KPIs.	High

5. Non-functional Requirements

ID	Area	Requirement
NFR-01	Usability	Use consistent layouts, readable labels, clear units, and intuitive filters.
NFR-02	Performance	Test report interactions and record actual response behavior on the agreed environment.
NFR-03	Reliability	Reconcile headline KPIs against source-level or independent calculations before release.
NFR-04	Data integrity	Document table grain, keys, relationships, and transformations; avoid joins that inflate totals.
NFR-05	Security	Do not commit credentials, access tokens, or unnecessary sensitive data to the public repository.
NFR-06	Maintainability	Document KPI definitions, assumptions, cleaning steps, and known limitations.
NFR-07	Compatibility	Verify the report in the agreed Power BI Desktop environment and document dependencies where relevant.

The KPI formulas, slicers, delivery eligibility rules, and validation checks should be agreed by the team before final implementation.
